

Decision Grid: Five Criteria

Decide What Should Be Delegated to AI

Instructions: For each criterion, note your analysis. If tacit knowledge is high, STOP — document first before delegating.

CRITERION	DESCRIPTION	YOUR EVALUATION
Cost of Failure	What is the real cost if it goes wrong? - (in \$ or in impact)	
Verifiability	Can you see the error? - Automatic - By eye - Invisible otherwise	
Frequency	How many times per month? - (Determines the form, not the possibility)	
Tacit Knowledge	How much of this work depends on things that aren't written down? - ● VETO if high	
Reversibility	Can it be corrected without damage? - Yes - With effort - No	

● **Golden Rule:** If tacit knowledge is high, you must document first. You cannot delegate what you haven't written.
